1. Introduction

Transika Institutional is an OTC desk and managed tGHS treasury for institutional merchants. You sell (or buy) stablecoins at the desk, settle into a Ghana cedi treasury balance (tGHS), and pay out to MoMo or bank beneficiaries.

This guide covers the merchant Dashboard: sign in, request products, run OTC to tGHS, manage your team, and set up API keys and webhooks. Full HTTP reference is in the API docs linked from the sidebar.

- Dashboard: <https://institutional.tran-sika.com/>
- API: <https://institutional-api.tran-sika.com/>
- Support: info@tran-sika.com
- Statement issuer: Transika Ltd

2. Login & account

2.1 Sign in

1. Go to <https://institutional.tran-sika.com/> and choose Sign in.
2. Enter email and password.
3. If prompted, enter the 6-digit one-time code from email.
4. You land on Overview.

2.2 Create account

1. Go to <https://institutional.tran-sika.com/> and choose Get started (or Create account).
2. Enter name, account (organisation) name, email, and password (minimum 8 characters).
3. Verify with the email OTP.
4. Continue to Overview.

2.3 Accept an invite

1. Open the invite link from your organisation owner.
2. Set your name and password.
3. Verify OTP and join that merchant account.

2.4 Forgot / reset password

1. On login, choose Forgot password and enter your email.
2. Open the reset link from email and set a new password.

2.5 Account notes

- Most merchants require OTP after password.
- Test Partner accounts may skip OTP and remain Test-only (Live locked).
- Live trading and Live API keys require Transika to enable Live on your merchant.

3. Getting started & access

3.1 KYB status

Until KYB is approved you may see a banner. Pending, rejected, or suspended status limits product use. Contact Transika if you need help with approval.

3.2 Test vs Live mode

- Use the Mode switcher in the sidebar (Test | Live).
- Test and Live data are completely separate: balances, trades, payouts, keys, and webhooks.
- An amber banner appears in Test mode.
- Live is unavailable until Transika enables it for your merchant.

3.3 Feature request

Some products are locked until you request access. Locked menu items show Request or Pending and open Settings -> Features.

OTC

Unlocks OTC desk and tGHS treasury

API access

Unlocks API keys and Webhooks

1. Open Settings -> Features (or click a locked nav item).
2. Request access for the product you need.
3. Wait for Transika approval (Pending -> Approved).
4. Optionally control whether the product appears in the navbar.

4. Overview

Path: Overview. Shortcuts into OTC, tGHS, and Transactions, plus recent OTC trades when OTC is unlocked. Use this as your daily landing page.

5. Beneficiaries

Path: Beneficiaries. Save MoMo and bank accounts before payouts or OTC settle-to-fiat.

1. Click Add beneficiary.
2. Choose network (MoMo or bank).
3. Enter account details and resolve the account name.
4. Approve / save. Search or delete later as needed.

Tip

Create beneficiaries before your first tGHS Pay. OTC settle to managed tGHS does not need a beneficiary; Ghana payouts do.

6. OTC desk

6.1 What it is

Trade USDT or USDC for Ghana cedis. For treasury use, settle to managed tGHS so the amount credits your tGHS balance after Transika confirms funding and mints.

6.2 Trade list

Path: OTC. Tabs: Needs you / All / Settled. Actions: New trade, Refresh, View tGHS, export CSV by date.

6.3 Create an OTC to tGHS trade

1. OTC -> New trade.
2. Choose Sell crypto (stablecoin to GHS/tGHS).
3. Select asset and network (for example USDT on Base).
4. Enter amount.
5. Choose settle mode: Managed tGHS (not MoMo/bank beneficiary).
6. Submit and open the trade detail page.

6.4 Trade lifecycle

Quoted

Accept or decline the quote

Accepted

Fund: paste the crypto funding tx hash (and proofs if asked)

Funded

Wait for Transika to confirm and mint tGHS

Settled

Done - check tGHS balance

Cancelled / rejected / expired

Terminal - start a new trade if needed

6.5 Test mode

In Test, you may see Complete in Test on non-terminal trades. That simulates the ops path so you can practice without Live funding.

6.6 After settle

- tGHS balance increases under tGHS for the current Mode.
- Transactions and Activities show the mint.
- Statements show FX conversion/GHS Provisioning for that mint.

7. tGHS treasury

7.1 Balance & wallet

Path: tGHS. View balance for the selected Mode. Wallet tab shows your address (copy / open explorer).
Minting is done via OTC settle to managed tGHS.

7.2 Pay (disbursement)

1. tGHS -> Pay.
2. Enter amount (tGHS and GHS are 1:1).
3. Select a beneficiary.
4. Complete originator / transaction fields as required.
5. Submit. tGHS is burned and Ghana payout is initiated.
6. Open the payout receipt to track burn hash and status; Refresh if needed.

7.3 Activities

Filter mints and payouts, export CSV, and open individual payout receipts.

7.4 Statuses to know

- Completed - payout succeeded.
- Payout failed after burn - wallet already reduced; Transika reminds as a statement Reversal when reissued.
- In flight (burn / payout pending) - watch the receipt and notifications.

8. Transactions & statements

8.1 Transactions

Path: Transactions. Lists tGHS mints and payouts for the current Mode. Search and filter; open a mint to its OTC trade or a payout to its redemption receipt. Use the card link to Account statements.

8.2 Statements

Path: Statements (from Transactions). Issued by Transika Ltd. Choose from/to dates (maximum 92 days), Generate, then download CSV, Excel, or PDF.

FX conversion/GHS Provisioning

OTC or admin mint credited

Disbursement

tGHS burned for a payout (including failed burns)

Reversal

Remint after a failed payout (credit)

Opening and closing balances are built from these lines so they track burned and minted tGHS for the period.

9. Team

9.1 Roles

Owner

Full control including invites and team management

Operator

Day-to-day OTC, tGHS, and operations

View only

Read-only access

9.2 Invite and manage

1. Settings -> Team.
2. Owner invites by email and chooses Operator or View only.
3. Invitee completes Accept invite (see Login).
4. Owner can change role, remove a member, or cancel a pending invite.

9.3 General profile

Settings -> General shows your name, email, role, and merchant name.

10. Development (API & webhooks)

10.1 Unlock API access

1. Settings -> Features -> request API access.
2. After approval, API keys and Webhooks appear in the menu.
3. Open API docs from the sidebar for full endpoint reference.

10.2 API keys

1. API keys -> Create.
2. Name the key; choose test or live; set scopes (api:read / api:write).
3. Add allowed IP addresses (required).
4. Copy the secret immediately - it is shown once.
5. Edit IPs or revoke keys later as needed.

Live keys

Creating Live keys requires Live to be enabled on your merchant. Prefer Test keys while integrating.

10.3 Webhooks

1. Webhooks -> Add endpoint (HTTPS URL).
2. Choose test or live and event filters (tGHS payout lifecycle).
3. Store the signing secret; verify signatures on your server.
4. Use Send test, Rotate secret, or Revoke as needed.

10.4 Environments for developers

- API base: <https://institutional-api.tran-sika.com/>
- Live: <https://institutional-api.tran-sika.com/v1/...>
- Test: <https://institutional-api.tran-sika.com/v1/sandbox/...>
- Dashboard Mode and API key environment must match the data plane you intend to use.
- Dashboard login is separate from API keys.

10.5 Suggested integration path

1. Request API access; create a Test key and webhook.
2. Add beneficiaries; run OTC to managed tGHS in Test (Dashboard or API).
3. Payout via API; consume webhooks.
4. Reconcile with Transactions and Statements.
5. Move to Live when enabled.

11. Notifications

The header bell shows environment-scoped alerts (for example OTC updates). Open the list, mark items read, or mark all read. Optional sound can be muted. Notifications can deep-link into the relevant trade.

12. Quick reference

Happy path - OTC to payout

1. Sign in -> select Test or Live.
2. Request OTC if the menu item is locked.
3. Add a beneficiary (for payouts).
4. OTC -> New -> Sell crypto -> settle Managed tGHS -> fund -> wait until Settled.
5. tGHS -> Pay -> choose beneficiary -> confirm.
6. Track under Transactions / payout receipt.
7. Optional: generate a Statement for the period.

13. Glossary

OTC

Desk trade between stablecoin and GHS / tGHS

tGHS

Managed Ghana cedi treasury balance (1:1 with GHS)

Disbursement

Burn tGHS and pay Ghana MoMo or bank

Reversal

Remint after a failed payout

Mode

Test vs Live data plane in the Dashboard

Feature request

Ask Transika to unlock OTC or API access

For endpoint schemas, webhook signatures, and Test details, use the API documentation linked from the Dashboard sidebar.
